

PHASE 3

Workflow Development & Execution

1. Objective

Automate the laptop request lifecycle using Flow Designer so that manager approval, status updates, notifications and IT handoff occur with minimal manual intervention.

2. Flow Trigger

Flow Designer trigger configuration.

3. Subtask 1 – Initialize Request & Set Default Status

Action: Update Record. Set Status to Pending Approval. This ensures every new request begins in a controlled state.

Update Record action setting Pending Approval.

4. Subtask 2 – Manager Approval Request

Action: Ask for Approval. The Manager reference field is used as the approver and the flow waits for Approval or Rejection.

Expected behavior: a sysapproval_approver record is created, the manager is assigned as approver, and the manager receives an approval notification.

Ask for Approval action.

5. Approval Notification

approval email notification configuration.

6. Subtask 3 – Approval Decision Handling

Use an If / Else branch to evaluate the approval result.

If/Else approval decision logic.

7. Subtask 4 – Optional IT Notification

After approval, use Send Email to notify the IT team that laptop provisioning can begin.

post-approval IT notification.

8. Flow Lifecycle Summary

Record Created → Pending Approval → Manager Approval → Approved / Rejected → Employee Notification → IT Fulfillment for approved requests.

Setting	Value
When	Record is Created
Table	Laptop Request Form (u_laptop_request_form)

Setting	Value
Purpose	Start approval process immediately after submission

Setting	Value
